Lean Six Sigma Yellow Belt - Juran - 2013-04-24

Lean Six Sigma is a result of two powerful methodologies (Lean and Six Sigma) that have a complementary toolkit. Combining the two techniques with effective team skills has provided vast improvements in many organizations. The fundamental objective of Juran's Lean Six Sigma Service curriculum is to develop a methodology and strategy that enable

individuals and organizations to successfully improve processes and reduce variation. At a project level the Lean Six Sigma DMAIC process (Define, Measure, Analyze, Improve, and Control) is an improvement system for existing processes falling below specification and provides methods for obtaining breakthrough improvement. Yellow Belts are active participants in the process being improved. They can also be ad-hoc team members working as subject matter experts who help project teams from time to time sharing their specialized knowledge. Becoming a Yellow Belt is the first tier beyond basic awareness training in Juran's Lean Six Sigma Service training program.

Managing the Software Process - Watts S. Humphrey - 1989

The author, drawing on years of experience at

IBM and the SEI, provides here practical guidance for improving the software development and maintenance process. He focuses on understanding and managing the software process because this is where he feels organizations now encounter the most serious problems, and where he feels there is the best opportunity for significant improvement. Both program managers and practicing programmers, whether working on small programs or large-scale projects, will learn how good their own software process is, how they can make their process better, and where they need to begin. "This book will help you move beyond the turning point, or crisis, of feeling over-whelmed by the task of managing the software process to understanding what is essential in software management and what you can do about it."
